Rope Length Transmitter

Tilt Angle Sensor

Pedal Actuated Transmitter

Wind sensor

THE ROPE LENGTH TRANSMITTER

Rope Length Transmitters were used for length and speed measurements of linear movement operations in several applications. Particularly they are easy to mount and have flexible designs. Besides a number of customized solutions we have three standard designs which can be used in different applications for length measurements. All three designs con-

tain in a flat plastic or robust aluminium casing a low-mass high-precise measuring drum with extremely solid spring-return. The winding of the robust high-flexible steel rope will be on one layer. All standard designs have a flange, coupling or gear adaptation and are suitable for adaptation of own encoder systems or for customary in trade encoder systems.

LOW-COST VERSIONS FOR MEASURING
RANGES UP TO MAX. 5.000 MM

LOW-PRICED METAL DESIGN FOR MEASURING
RANGES UP TO MAX. 15.000 MM

ROBUST, INDUSTRIAL VERSION FOR LARGE
MEASURING LENGTHS UP TO MAX. 60.000 MM
